2007-6 (Oct-Nov)

PONDERINGS DEP'T

OK...it's been a long weekend. The RMC's were at the least....spectacular! For those of you in the hinterland (outside of Colorado) who showed up, glad you could make it and now you know what we are talking about. It doesn't get any better than this.

The good news is each time we have a contest more people come out of the woodwork and want to do something better! The BBQ banquet, Ruckus in the Rockies at the RMC's, the FAC Rocky Mountain Scramble bash, and the upcoming "Gas Attack" by Dave Wineland at the October contest..boy are we having fun!

Top all that off with a special award from the AMA on our 50th anniversary as a charter club. And, we are just getting better!

And...many special thanks to our own in-house graphics guy Steve Jones. He did the wonderful graphics for our 50th, the continuing effort on the RMC's and now the new NFFS 40th

T-shirts. I don't want to forget the most photographed member of the club either.....Don.

Thermals!, or heat from the lights, or whatever...
Rick

Ma..... Dave said he's havin' a "Gas Attack" at the next contest. Can I git some of that stuff you use fer junior and bring it fer 'em?

"The MAX-OUT" newsletter is printed about the second or third (?) week of the month. Submissions should be not later than the end of the prior month.

TO JOIN THE CLUB OR SUBSCRIBE

- Full membership is offered to any current AMA member: \$40
- SAM-1 Crossover membership: \$20

NOTE: !!!!

Going to the field Monday-Friday!
Don't forget to call the Corps of Engineers trailer on Quincy Rd,
The number is (303) 690-3816

HAPPY 50th FROM THE AMA DEP'T

The MMM club leadership council was recently approached by AMA's District IX Vice President, Mark Smith and the district's Associate VP for Colorado, Jim Wallen, inviting us to meet with them to mark the MMM's 50th birthday. On Saturday, Sept 8, we gathered for a wonderful evening at the Perfect Landing Restaurant at Centennial Airport.

We were graced by the company of Mark's and Jim's wives, Ruth and Sue, as well as the MMM's own Kathy Murphy, Karen Gray, Sue Etherington, Cindy Pangell, and my date, my daughter Linda. Mark and Jim graciously noted the significance of the MMM's golden anniversary and the prominence our club now holds in the aeromodeling community. They presented the club with a beautiful engraved plaque that I'll be bringing to the next several contests and to the Annual Meeting. We thanked them and AMA for their great support of our activities. Then Mel Gray presented Mark and Jim with official Rocky Mtn Champs tee-shirts and Chuck Etherington gave them color prints of the 2007 FAI Annual group photo. Jerry Murphy and Rick Pangell rounded out the official MMM entourage. Look for a picture of that unforgettable evening event in the District IX section of an upcoming issue of Model Aviation magazine.

A picture is later in this issue.

MMM 42nd Annual Rocky Mountain Champs Contest Results

Wow, don't quite know how to describe the event in such a small newsletter....so.....

Don DeLoach, Jerry Murphy and first time contestant, Pete Reinhart are collaborating on a whiz bang report to be in the *NFFS DIGEST* November issue.

A big write up and many pictures. We want to share all of the fun and excitement we have here with all NFFS members.

THANKS DEP'T

With the growth of the MMM Club comes the need to do some things differently. Nowhere is this more evident than in the running of the major contests. No longer are one or two CDs able to do

all the contest preparation, run the contest while competing, and then do all the necessary post-contest reports and forms. More and more these contests are becoming a group effort, requiring volunteers in many different capacities. I want to formally say thanks to all who helped with the Rocky Mountain Champs and attempt here to acknowledge some of the names. Please forgive me if I have overlooked someone.

Don DeLoach and Jerry Murphy – CDs (performing all the work that goes into planning and executing a big contest like this).

Cindy DeLoach - running the score-table all day Sunday and Monday,

Darold Jones, Bill Lovins, Steve Jones, Mel Gray, Rick Pangell and Dick Wood - running the score-table and performing other miscellaneous tasks.

Steve Jones – RMC flyer and T-shirt design.

Jerry Murphy, Darold Jones and Duane Hjerleid – Organizing and buying the food and ice for the on-field food service, cooking on Sunday and cooking/running the food service on Monday.

Carol Sisk - baking cookies and a birthday cake for Willard Smitz,

Marc Sisk - passing around Carol's home-baked cookies on Saturday.

Jeff Pakiz - bringing doughnuts each day.

The VanLandingshams and others – offering up brownies and other treats throughout the weekend.

Lee Hines - donating a cold watermelon which we all enjoyed after Sunday's flying.

Mel Gray, Rick Pangell, Mark Covington, Lee Hines, Neil Myers and Darold Jones - breaking down camp,

Duane Hjerleid - taking Pete to the Hospital on Saturday,

Herb Kothe, Randy Reynolds - launch directors for the FAC Mass Launches.

Steve Riley - donating a pile of Jimmie Allen 1930's maps for all the JA flyers, and a framed P-38 photo for the winner.

Rio Grande Squadron FAC (Albuquerque) - donating hundreds of old model magazines which were given out at the banquet.

That's what makes big contests work. Thanks everyone!!

“The CD's”

Jim O'Reilly

Grant Carson of Gainsville, TX is MMM's newest member! Before he even arrived at his first RMC he sent in his membership check, wanting to show support for our great field and club. *Yes, the MMM club IS fun...*

Larry Kruse and his NOS Hustler. Larry seems to build everything and is a great flyer. His scores prove it (he's a great event picker too!)

JUST SO YOU DON'T THINK IS ALL WE DO IS FLY MODELS DEPT

Bill Lovins sent me this dissertation. What it is describing is "peel strength" of the different adhesives to balsa, ala cap strips. The application is just as valid for spar and web caps and was a big issue on spacecraft when a force across the fiber was applied to composite laminates. The application is most apparent on carbon cap strips near the trailing edges of ribs as they intersect with the trailing edges. It's empirical, yes, but very indicative. To avoid peel, the best solution is a wrap or mechanical tie down device or cover layment.

For note: Ken Phair sent me an article from "Advanced Materials and Processes" trade magazine a couple of years back. I have been waiting for an opportune time to reprint the good parts, but haven't had the space. So, if you want a soft copy of it please reply to themaxout@aol.com and I will forward it to you. It lays down all of the basics and subtle differences of the modern adhesives from cyano to urethanes. It's worth a read.

Here is a very un-scientific test that I did a while back and you might find it useful. Enclosed is a picture of some of the tests.

Bonding .007 carbon sheet to balsa

The usual adhesive (CA) used in bonding carbon sheet to balsa does a poor job and I decided to try some alternatives. Using a radius of about 3-4", I tried the following adhesives (without thinning). The samples were then subjected to heat, cold and humidity. Then moderate pressure was used to try to peel the carbon away from the balsa. Using a scale of 1 (poorest) to 10 (best), here's the results:

Ambroid= 3

CA (medium)= 7

UGL (contact cement)= 5

Krazy (a CA)= 9

Stix-It (a contact cement)= 4

30 minute epoxy= 8

Goop= 10

Formula 560 Canopy Cement= 10

Note: the carbon sheet I used in the tests was what is usually used for rib cap strips. Dull on one side and shiny on the other and strips from the 3 X 36" sheet in uniform widths. I got my carbon from MRL.

NOW FOR THE GOOD STUFF DEP'T

Don't know quite how to intro this as it is very hot...politically, but golly gee, it's time for some reassessment. A LOT of discussion goes down about the events, number of them, and all sorts of things like that. And on issue that is constantly showing it's head out of the hole is the builder of the model rule, BOM.

Builder of the Model Rule – Time for a change

“At this year's NFFS banquet in Muncie NFFS president Rex Hinson said in his state of the NFFS talk that membership has declined by 13%. This is a shocking development that if it continues we will cease to exist. In business, if the company experienced such a drastic drop in sales the board would be asking very hard questions and people would be assigned to specific tasks to return to previous levels of performance.

So, what about NFFS and free flight in general? We all know that flying field availability is an issue, but is there more to the story? What if free flight could be more welcoming to people who want to give this sport a try? The current BOM rule says in effect, go away and learn how to build and then come back once you have built your model. Putting such a high barrier to entry is surly one factor in our lack of growth.

Here in Colorado, the Magnificent Mountain Men Club has established the reputation of being an open and welcoming organization. The result is our club is growing while NFFS is in decline. What is it about the MMM Club that is so different? We don't [actively] enforce the BOM.

Here is one example of how not enforcing the BOM had helped free flight grow. One of my old RC glider friends brought a new fellow out to the field for one of our monthly meets. His fellow had flown FF as a junior back in Texas but had been away from FF for many years. Rob Romash gave him a HLG and said, “Here, go have fun”. Well he did have fun and in fact he won the contest. Mark Covington became a free flyer that afternoon. That isn't the end of the story. Mark returns to Colorado Springs and tells his friend Bill Stevens who runs Stevens AeroModel, an RC kit company, about his HLG experience. Mark and Bill go to work and produce a new laser cut HLG kit as well as a DLH body kit. Now Bill and his son are MMM members and all three are competing in free flight contests. What did avoiding BOM do for free flight, it gained us three new flyers and a new kit manufacturer. Check it out on the web at <http://www.stevensaero.com/shop/home.php>

Does this example point to a possible solution to NFFS's negative growth? Well the experience here in Colorado sure indicates that such a change can produce positive results.

Insanity is often defined as doing the same thing over and over and expecting different results. I believe it is time to try something different to see if different results can be obtained. Lets get rid of BOM now before it is too late.”

Editor's note: Murph has made an excellent point and his discussion continued later. The BOM as it is interpreted does not leave nay room for discussion. However, there are some events and situations that need liking at. What about the kid or visitor who shows up at a contest? Most all of us give them a HLG and let him go at it. An experienced builder, say an indoor flyer or RC flyer can generally take it from there if they are interested. But the time lag from tossing a HLG to becoming an accomplished builder is *long*. There must be a way to expedite this to generate new free flyers.

Also, *not all events should be non-BOM. Some events should be BOM.* Scale would come to mind, AMA gas (not Classic Gas or SLOP), Mulvihill, and some others, but the room for openness is P-30, NFFS Glider, Gollywock, HLG, CLG. The reason would be the non-BOM events are more about flying than building. I would open the door also because of the many models that are estate available. It's a shame that one can't resurrect a fellow modelers creation. The building incentive comes because those models don't last forever anyway. - Rick

*October 21, 2007 MMM Max Meet
CD: Dave Wineland*

For non-gas powered airplanes:

1. Each contestant gets to attempt up to three strings in any event(s). The event(s) can be three strings in the same event, or different events, contestants' choice. Don't worry...enter all 3 strings and they will all count toward your best string. You won't forfeit any.
2. \$1 entry fee per string.
3. A string is defined as the number of consecutive 2 or 3 minute maxes for the applicable event, plus the percentage of the max attained on the last flight of a string.
4. For the following events the max is 2 minutes: HLG, CLG, P-30, and F1G, 020 replica and any other (normally) two minute event..
5. For the following events the max is 3 minutes: (Cat II) Mulvihill, Nos Rubber, OT Rubber, F1AB, and any other (normally) three minute event.
6. Maxes will *not* be increased for fly-offs in any event, nor will engine runs be decreased -- it is simply how many consecutive standard maxes one can make.
7. Upon the first max of any string, notify the CD that you are starting your string and record it when it ends. When a contestant drops a max the score will be converted to percentage of max attained. Example. 4 maxes plus 110 out of a possible 180 seconds would be 4.61 maxes
8. Highest score wins and the winner takes the pot!

Special event:

AMA GAS ATTACK: \$ 100 to the winner

Rules:

- *Any piston powered airplane, all flights: 9 s engine run, 180 s Max (two attempts per flight, 40 s is official)
- * Winner is the one with the longest string of maxes (see 7, above).
- * \$5 for first entry, \$2 for each successive entry, no limit on the number of entries.

FIRST CLASS

IF THIS BOX IS CHECKED, THIS IS YOUR
LAST ISSUE UNTIL YOU PAY YOUR DUES!
